TABLE OF CONTENTS

The following synoptic table shows the first page of each of the principal sections in the respective numbers of the MONTHLY WEATHER REVIEW for 1930:

REGULAR MONTHLY SECTIONS, 1930

[Page number]

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
Meteorological summary for Chile [1]	26	68	119	163	210			334		424	468	
Bibliography	26	68	119	163	211	256	296	335	377	424	468	499
SOLAR OBSERVATIONS:												
Solar and sky radiation measurements	26	68	120	164	211	256	297	335	378	424	468	500
Positions and areas of sunspots	27	69	120	164	212	257	298	336	379	425	469	500
Provisional sunspot relative numbers	28	70	121		213	258	298	336	379	425	470	501
Aerological observations	28	71	121	165	213	258	299	337	380	426	470	501
WEATHER IN THE UNITED STATES:												
The weather elements	30	72	122	167	215	260	300	338	381	427	471	503
Severe local storms (table)	32	74	124	169	216	261	302	339	382	428	472	504
Rivers and floods	32	74	125	169	219	263	303	340	383	429		505
Effect of weather on crops and farming operations	33	76	125	170	221	264	304	(2)				
WEATHER ON THE ATLANTIC AND PACIFIC OCEANS:												
North Atlantic Ocean	34	77	126	170	223	265	305	341	384	429	473	505
Ocean gales and storms (table)	35	78	127	171	223	266	306	342	385	431	474	506
North Pacific Ocean	36	79	128	172	224	267	306	343	386	432	475	507
Typhoons and depressions				173	225			343			476	
CLIMATOLOGICAL TABLES: [3]												
Condensed climatological summary (by States)	38	80	130	174	226	268	308	345	387	434	477	509
Table 1 (United States stations)	39	81	131	175	227	269	309	346	388	435	478	510
Table 2 (Canadian stations)	42	84	134	178	230	272	312	349	391	438	481	513
Lithographic charts (serial numbers)												

[1] For the following month or months.
[2] Discontinued after July, 1930.
[3] For a description of tables and charts see pp. 37–38.

The following charts appear in each number of the REVIEW from January to December, inclusive, except as noted after Chart VI:

CHART I. Departure of the mean temperature from the normal.
II. Tracks of centers of anticyclones.
III. Tracks of centers of cyclones.
IV. Percentage of clear sky.
V. Total precipitation for the month.
VI. Isobars at sea level and isotherms at surface; prevailing winds.
VII. Total snowfall (January to April and October to December).
VIII (etc. Weather maps of the North Atlantic Ocean (selected days showing principal storm tracks).
Annual temperature departures for the United States, 1930. (December only.)
Annual precipitation departures for the United States, 1930. (December only.)

50346—31

CORRECTIONS AND ADDITIONS

1920 INDEX

Page xix: Under "Woolard, Edgar William," the fifth entry, "Light scattering by air, and the blue color of the sky. 220," should be credited to "Wood, R. W."

1925 INDEX

Page vi: Entry "Day, P. C. The Drought of 1925" change pp. "310–311" to "410–411." The same change applies to the entry under "Droughts."

APRIL, 1926

Page 144: Table 18, bottom of third column, "38.50" should be "28.50."

AUGUST, 1927

Page 349: In Table 1, under caption "St. Louis", column headed "Warm", in the first line "1891" should be "1901"; in the next column, "5.4" should be "5.7."

APRIL, 1929

Page 159: In Figure 1 the *solid* line refers to *water;* the *dotted* line to wind.

SEPTEMBER, 1929

Page 362: Figure 1, in the lower left-hand corner the equation beginning "$1\frac{2}{\text{cm}}$" should be "1 cm.^{2}."

NOVEMBER, 1929

Page 455: First column, third line from end of paragraph, "Labore" should be "Lahore."

Page 463: Second column, last paragraph, third line, "alternation" should be "alteration."

1929 INDEX

Page xi: Entry "Reed, Charles D. Hail in Iowa" should be deleted; this entry belongs in the preceding volume (No. 56).

FEBRUARY, 1930

Page 45: Table 3, "Davos" (September column) should be "385" instead of "585."

Page 53: First column, the two last paragraphs should be inserted at the foot of the preceding column.

Second column, the first three paragraphs belong on page 58, just above the final paragraph in the second column.

MAY, 1930

Page 180, section on method of arbitary corrections:

V_a and E_a should be V_d

E_b should be V_b

Page 182:

Value for e, entered $\frac{h}{100\ (E)}$, should be $\frac{h}{100}\ (E)$,

Figure 2, curved (dew-point) lines should be numbered, upper to lower, 50° to 15° in 5° intervals.

Second column, second value of Y should be

$$\frac{738}{\frac{3{,}037.5}{t-5.5}-24+8}-7.$$

Last equation, second factor in first numerator, entered (,757), should be (8,757).

Page 183:

Fraction in first line, entered $\frac{d^2Y}{2}$, should be $\frac{d^2Y}{dt^2}$.

Fraction in second line, entered $\frac{d^{2d}Y}{dt^2}$, should be $\frac{d^2Y}{dt^2}$.

Page 184, figure 6:

Upper diagram for Grand Junction, upper end of solid line numbered 80–40, should be 85–40.

Lower diagram for Medford, extremities of dotted line numbered 56–30, 66–30; should be 61–25 and 66–35, respectively.

Page 185: Last complete paragraph, seventh line; the word "cross" should be "circle."

MAY, 1930

Page 204: In the diagram (fig. 1) the number "4", following "Jan.," "Feb.," and "Mar.," should be deleted as the three lines represent *monthly* means, *not individual dates.*

SEPTEMBER, 1930

Page 373: The author's name should be spelled "Simson."

JULY, 1930

Page 277: First column, insert "Southbound" in boxhead; second column, insert "1930" between lines 18 and 19 (counting from bottom); fourth column, Apr. 15–21, 1930, change "67.8" to "76.8"; next column, Mar. 4–10, change "76.4" to "74.6"; same column, Apr. 15–21, 1930, change "77.6" to "77.5"; third column from end, Oct. 15–21, 1929, change "91.1" to "81.1"; last column, May 27–June 2, 1929, change "80.0" to "82.0"; footnote 1, change "Aug. 10" to "Aug. 12."

AUGUST, 1930

Page 332: First column, seventh line, the sentence beginning "Rain began at 6.15 p. m.," and continuing to the end of the paragraph, should be transposed to the next column, immediately following the paragraph in small type.

MONTHLY WEATHER REVIEW SUPPLEMENT NO. 34

Page 30: Erie, Pa., the total annual precipitation should be 36.93.

SUBJECT AND AUTHOR INDEX OF THE MONTHLY WEATHER REVIEW, 1930. VOL. 58

Aerology:
Aerological observations made with a captive balloon from a moving ship. (4 figs.) (A. Thomson.) 494–495.
Flying over a rough country in bad weather. *Note.* (P. A. Miller.) 25–26.
Meteorological conditions on the Santiago (Chile)–Buenos Aires (Agentina) airway. (J. B. Navarrete.) 444–446.
Aircraft (*see also* "Airplanes," "Balloons"):
Meteorological notes on the formation of ice on aircraft. (C. G. Andrus.) 22–24.
Air mail. Pilot encounters severe thunderstorm in Florida. *Note.* (J. W. Smith.) 117–118.
Airplanes (*see also* "Aircraft"):
Supersaturation and ice coating of airplanes. (W. J. Humphreys.) 245–246.
Airways:
Flying over a rough country in bad weather. *Note.* (P. A. Miller.) 25–26.
Meteorological conditions on the Santiago (Chile)–Buenos Aires (Argentina) airway. (J. B. Navarrete.) 444–446.
Alaska. The climates of. (27 figs.) (E. M. Fitton.) 85–103.
Albedo. The measurements of the albedo of a snow cover. (2 figs.)
Alexander, George W. Fire-weather and fire-climate. 370–372. (N. N. Kalitin.) 59–61.
Algué, Father José. 1856–1930. *Obituary.* 295.
Alps. K. Knoch and E. Reichel on the distribution and annual march of precipitation in. *Note.* (S. Diettrich.) 499.
Alter, Dinsmore. Note on the British Isles rainfall predictions. 25.
Alter, J. Cecil. Mud floods in Utah. (2 figs.) 319–321.
Andrus, Clarence G.
Ceiling and visibility in the Northeastern States. 198–199.
The Chicago snowstorm of March, 1930. *Note.* 376.
Meteorological notes on the formation of ice on aircraft. 22–24.
Arctic region. New arctic weather stations. *Note.* (C. F. Talman.) 67.
Argentina. Meteorological conditions on the Santiago–Buenos Aires airway. (J. B. Navarrete.) 444–446.
Armington, John H. Are present methods in cooperative climatological work effectual? 453–455.
Atmospheric electricity:
The electrical field of overhead thunderclouds. *Note.* (S. K. Banerji.) 252.
Further studies on the electrical charges of thunderstorms [a report of progress]. (J. C. Jensen.) 115–116.
G. C. Simpson on thunder and lightning. *Abstract.* (A. J. Henry.) 497–498.
Note on the effect of a lightning bolt. (1 fig.) (A. G. Simson.) 467.
August, 1930:
European weather in. *Note.* 333.
Extreme July weather indicates August weather. *Note.* (C. D. Reed.) 332.
Australia. Rain map of. *Note.* (C. F. Brooks.) 423.
Aviation:
Average visibility at Chicago Airport. (1 fig.) (F. H. Weck.) 204.
Aviation weather hazards. (T. R. Reed.) 231–234.
Ceiling and visibility in the Central States. (V. Jakl.) 201–202.
Ceiling and visibility in the Northeastern States. (C. G. Andrus.) 198–199.
Ceiling and visibility in the Pacific Coast States. (D. M. Little.) 203–204.
Ceiling and visibility in the Rocky Mountain States. (H. M. Hightman.) 202.
Ceiling and visibility in the Southeastern States. (J. A. Riley.) 199–201.
Flying over a rough country in bad weather. *Note.* (P. A. Miller.) 25–26.
Meteorology and its importance to aviation. (W. J. Humphreys.) 196–197.
Balloons. Aerological observations made with a captive balloon from a moving ship. (4 figs.) (A. Thomson.) 494–495.
Banerji, S. K. The electrical field of overhead thunderclouds. *Note.* 252.
Barnes, Carleton P. E. M. Keyser on an "Inland Empire long-period rainfall riddle." *Note.* 498.
Baur, Franz. The present status of correlation investigations in meteorology. (2 figs.) 284–286.
Beiträge zur Langfrist-Wettervorhersage. (F. Groissmayr.) *Repr.* 294.
Belden, William S. Tornadoes in Missouri in May, 1930. 208.
Bennett, Maitland C. (*See* "The Weather Elements" in the table on p. III of this index.)
Bibliography (Weather Bureau Library). (*See* "Bibliography" in table on p. III of this index.)
Blair, Thomas Arthur. Winter temperatures in the upper Mississippi Valley. (24 figs.) 53–58.
Blackstone, Ira B. The Hardtner, Kans., tornado of June 3, 1929. (1 fig.) 325.
Blystone, Montello E. Glaze storm in South Dakota, November 18–20, 1930. *Note.* 466–467.
Bora. The bora. *Note.* (C. F. Brooks.) 423.
Botts, Adelbert K. The rainfall of Salvador. 459–466.
British Isles:
The great frost in, of February, 1895. *Note.* (A. J. Henry.) 67.
Note on rainfall predictions for. (D. Alter.) 25.
Broadcasting cosmic data. *Note.* (A. J. Henry.) 295.
Brooks, Charles E. P. His "Climate" reviewed. (A. J. Henry.) 25.
Brooks, Charles F.:
The bora. *Note.* 423.
City temperatures. *Note.* 423.
Forecasting mean winter temperatures for the North American interior. *Note.* 117.
G. Chatterjee on an upper-air temperature indicator for use with pilot balloons. 252.
Geophysical Institute, Leipzig, Germany. *Note.* 377.
Gulf Stream daily thermograms across the Straits of Florida. (24 figs.) 148–154.
Gulf Stream studies: General meteorological project. (2 figs.) 103–106.
International ice observations and Ice Patrol Service in the North Atlantic Ocean, season of 1929. *Note.* 334.
Polish Meteorological Institute annual for 1928. *Note.* 467–468.
The Quarterly Journal of the Royal Meteorological Society. *Note.* 374.
Rain map of Australia. *Note.* 423.
Scirocco invasions of central Europe. *Note.* 334.
Sea thermographs installed on S. S. Munargo, New York to South America. *Note.* 295.
Sunspots and the distribution of pressure over western Europe. *Repr.* 25.
Thunderstorm topknots. *Note.* 331–332.
Brooks, Charles F. and Fitton, Edith M. Weekly succession of Gulf Stream temperatures in the Straits of Florida. (3 figs.) 273–280.
Brunner, W. (*See* "Provisional sunspot relative numbers" in table on p. III of this index.)
Brunt, David. (Some problems of modern meteorology. *Repr.* 419–422.

California:
A contribution to long-time weather history of Tulare Lake. (2 figs.) (C. E. Grunsky.) 288–290.
Tornado at Vernon, March 15, 1930. (1 fig.) 324–325.
Calvert, Edgar B. The International Convention of Safety of Life at Sea, London, 1929. 156–159.
Canada. Relations between winters in Manitoba and the following spring in the eastern United States. (F. Groissmayr.) 246–247.

Casto, E. R. "Climatology of the Virginias." *Author's abstract.* 374–375.
Ceiling:
Average visibility at Chicago Airport. (1 fig.) (F. H. Weck.) 204.
And visibility in the Central States. (V. Jakl.) 201–202.
And visibility in the Northeastern States. (C. G. Andrus.) 198–199.
And visibility in the Pacific Coast States. (D. M. Little.) 203–204.
And visibility in the Rocky Mountain States. (H. M. Hightman.) 202.
And visibility in the Southeastern States. (J. A. Riley.) 199–201.
Charts:
A new rainfall chart of the earth. *Note.* (A. J. Henry). 252.
Rain map of Australia. *Note.* (C. F. Brooks.) 423.
South African rainfall map effectively presented by new graphical method. *Repr.* (D. S. Gates.) 254.
Chatterjee, G. On an upper-air temperature indicator for use with pilot balloons. *Review.* (C. F. Brooks.) 252.
Chicago Airport. Average visibility at. (1 fig.) (F. H. Weck.) 204.
Chile. (*See also* "Meteorological summary for Chile" in table on p. III of this index.) Meteorological conditions on the Santiago–Buenos Aires airway. (J. B. Navarrete.) 444–446.
China:
"Climatic provinces of." (Co-Ching Chu.) *Reviewed.* (Liu En-lan.) 209.
Torrential rains in northern China. *Note.* 333–334.
Chu, Co-Ching. "Climatic Provinces of China." Reviewed. (Liu En-lan.) 209.
City heat. City smoke and heat effects on minimum temperatures. (F. L. Disterdick.) 330–331.
City temperatures. *Note.* (C. F. Brooks.)
Clarke, Katherine B. The diurnal variation of the rainfall of Paris. *Transl.* 333.
"Climate." (C. E. P. Brooks.) *Reviewed.* (A. J. Henry.) 25.
Climate:
The climates of Alaska. (27 figs.) (E. M. Fitton.) 85–103.
Climatic conditions in the Louisiana Purchase as found by Lewis and Clark. (G. K. Greening.) 317–319.
Meteorological peculiarities of the Yakima Valley, Washington. *Notes.* (E. H. Jones.) 413–414.
Of Liberia. (4 figs.) (H. J. Coolidge.) 291–292.
Climatic cycles:
(1 fig.) (A. W. Giles.) 321–323.
In the Eocene. *Note.* (E. R. Miller.) 118–119.
Streiff's "The practicable importance of climatic cycles in engineering." (J. W. Shuman.) 114–115.
Climatological cooperative observers. Are present methods in cooperative climatological work effectual? (J. H. Armington.) 453–455.
"Climatology of the Virginias." *Author's abstract.* (E. Casto.) 374–375.
Clouds:
The electrical field of overhead thunderclouds. *Note.* (S. K. Banerji.) 252.
Persistence of a pronounced inversion above stratus after the latter has dissipated. (1 fig.) *Note.* (L. T. Samuels.) 209–210.
Thunderstorm topknots. *Note.* (C. F. Brooks.) 331–332.
Convection. Certain limitations on the possible values of the ratio of heat losses by convection and by evaporation at a water surface. (1 fig.) (N. W. Cummings.) 144–146.
Coolidge, Harold J. Climate of Liberia. (4 figs.) 291–292.
Coronas, Father José. (*See* "Typhoons and Depressions" in table on p. III of this index.)
Correlation:
Extreme July weather indicate August weather. *Note.* (C. D. Reed.) 332.
The present status of correlation investigation in meteorology. (2 figs.) (F. Baur.) 284–286.
Relations between winters in Manitoba and the following spring in the eastern United States. (F. Groissmayr.) 246–247.
Cosmic data. Broadcasting cosmic data. *Note.* (A. J. Henry.) 295.
Cotton. Weather and cotton production. (1 fig.) (J. B. Kincer.) 190-196.
Couissirat, Dr. Ladislau. Death of. (A. J. Henry.) 67.
Cox, Henry Joseph (1863–1930). *Obituary.* (A. J. Henry.) 24–25.
Crops. Snows do not govern crops. *Note.* (E. R. Henson.) *Note.* 117.
Cummings, N. W.
Alignment diagram for "R" of the energy-evaporation equation. (1 fig.) 142–144.
Certain limitations on the possible values of the ratio of heat losses by convection and by evaporation at a water surface. (1 fig.) 144–146.
Cycles:
Climatic cycles. (1 fig.) (A. W. Giles.) 321–323.
Weather recurrences and weather cycles. (2 figs.) (R. Gregory.) *Repr.* 483–490.
Cyclones and anticyclones:
A few tropical cyclones cross the Plateau of Mexico. *Note.* (A. J. Henry.) 210.
Frequencies of tropical cyclones, especially those of minor importance. (S. S. Visher.) 62–64.
January, 1930. *Note.* (A. J. Henry.) 25.
Of the Northern Hemisphere, January to April, incl., 1925. (25 figs.) (C. L. Mitchell.) 1–22.

Dague, Charles L. Disastrous fire weather of September, 1929. (1 fig.) 368–370.
Daily Weather Report (Meteorological Office, London). Changes in. *Note.* 118.
Day, Preston C. (See the following entries in table on p. III of this index, viz, "Weather Elements," "Severe Local Storms" (table), "Climatological Tables.")
Deeley, R. M. Sunspots and pressure distribution. *Note.* 423.
Devereaux, William C.
Drought in the Ohio Valley and water supply. 401.
Fog in the Ohio Valley. 107.
Dewpoint. At what temperature does frost occur? (W. J. Humphreys.) 61.
Dice, Marion E. Tornado at Vernon, Calif., March 15, 1930. (1 fig.). 324–325.
Diettrich, Sigismond R.
K. Knoch and E. Reichel on the distribution and annual march of precipitation in the Alps. *Note.* 499.
Oceanic, continental, Mediterranean and boreal climatic influences and mountain climate in Europe, compiled by Count Paul Teleki, professor of geography, and Zoltan de Nagy practice in the Institute of Geography. *Review.* 256.
Disterdick, Fred L. City smoke and heat effects on minimum temperatures. 330–331.
Droughts:
Drought in the Ohio Valley and water supply. (W. C. Devereaux.) 401.
End of the 1930 drought in the Potomac Basin. *Note.* (A. J. Henry.) 468.
The great drought of 1930 in the United States. (A. J. Henry.) 351–354.
The great drought of 1930 in the United States: Supplemental notes. (A. J. Henry, H. B. Humphrey, and B. C. Kadel.) 396–401.
Low water in the Kentucky River, 1930. (3 figs.) (W. S. Winn.) 401–402.
The measure of droughtiness. (S. Marcovitch.) 113.
Severe drought at Washington, D. C., April–May, 1930. *Note.* (A. J. Henry.) 163.
The weather of 1930 in the United States. (2 charts and 2 tables.) (A. J. Henry.) 496.
Dust:
Dustfall at Portland, Oreg., *Note.* (E. L. Wells.) 67.
Severe duststorms over Idaho, Washington and Oregon. *Note.* (O. W. Freeman.) 117.

Earth. A new rainfall chart of the. *Note.* (A. J. Henry.) 252.
Engineering. A. Streiff's "The practical importance of climatic cycles in engineering." *Discussion.* (J. W. Shuman.) 114–115.
Eocene. Climatic cycles in. *Note.* (E. R. Miller.) 118–119.
Equator. Nine waterspouts near. *Note.* 117.
Europe:
C. E. P. Brooks on the rôle of the oceans in the weather of western Europe. *Review.* (A. J. Henry.) 252–253.
Scirocco invasions of central Europe. *Note.* (C. F. Brooks.) 334.
Sunspots and the distribution of pressure over western Europe. *Repr.* (C. E. P. Brooks.) 25.
Weather in Europe in August, 1930. *Note.* (A. J. Henry.) 333.

Evaporation:
Alignment diagram for "R" of the energy-evaporation equation. (N. W. Cummings.) 142–144.
Certain limitations on the possible values of the ratio of heat losses by convection and by evaporation at a water surface. (1 fig.) (N. W. Cummings.) 144–146.
Rainfall—Altitude: Notes on rainfall and evaporation. *Repr.* (1 fig.) (G. E. P. Smith.) 253–254.
Excessive precipitation:
Maximum precipitation in short periods of time. *Note.* (C. D. Reed.) 294.
Record rainfall for Miami, Fla. (G. V. Fish.) 251–252.
Torrential rains in northern China. *Note.* 333–334.
Exner, Felix M. (1876–1930.) *Obituary.* 25, *and* 160–161.

Fassig, Oliver L. On the frequency of hurricanes in the vicinity of Porto Rico. 326–327.
Filtration. Weather conditions as factors in the filtration of the water supply at Detroit, Mich. (14 figs.) (B. Hudgins.) 354–362.
Fire climate. Fire weather and fire climate. (G. W. Alexander.) 370–372.
Fire weather:
Disastrous fire weather of September, 1929. (1 fig.) (C. L. Dague.) 368–370.
Relative humidity and short-period fluctuations in the moisture content of certain forest fuels. (A. G. Simson.) 373–374.
Some fire-weather comparisons. (2 figs.) (E. M. Keyser.) 365–368.
Fish, Geo. V. Record rainfall for Miami, Fla. (with discussion by A. J. Henry). 251–252.
Fitton, Edith M. (*See also* Brooks, C. F. and Fitton, E. M.) The climates of Alaska. (27 figs.) 85–103.
Florida:
Air mail pilot encounters severe thunderstorm in Florida. *Note.* (J. W. Smith.) 117–118.
Record rainfall at Miami. (G. V. Fish.) 251–252.
Florida Straits:
Gulf Stream daily thermograms across the Florida Straits. (24 figs.) (C. F. Brooks.) 148–154.
Weekly succession of Gulf Stream temperatures in. (3 figs.) (C. F. Brooks and E. M. Fitton.) 273–280.
Foehns. Greenland west-coast foehns: A discussion based on the foehns of January, 1929. (7 figs.) (L. R. Schneider.) 135–138.
Fogs. In the Ohio Valley. (W. C. Devereaux.) 107.
Forecasting:
Mean winter temperatures for the North American interior. *Note.* (C. F. Brooks.) 117.
Note on the British Isles rainfall predictions. (D. Alter.) 25.
Predicting minimum temperature, especially as a function of preceding temperature. (8 figs.) (E. S. Nichols.) (With a discussion by F. D. Young.) 179–189.
Weather recurrences and weather cycles. (2 figs.) (R. Gregory.) 483–490.
Forests. Forest-tree diseases caused by meteorological conditions. (E. E. Hubert.) 455–459.
Forest fires:
Disasterous fire-weather of September, 1929. (1 fig.) (C. L. Dague.) 368–370.
Fire-weather and fire-climate. (G. W. Alexander.) 370–372.
Forest fuels. Relative humidity and short-period fluctuations in the moisture content of certain forest fuels. (A. G. Simson.) 373–374.
Foscue, Edwin J. An unusual snowstorm in Texas. (5 figs.) 108–112.
Freeman, O. W.:
A new rainfall map of the State of Washington. *Note.* 422–423.
Severe duststorms over Idaho, Washington, and Oregon. *Note.* 117.
Frost:
At what temperature does frost occur? (W. J. Humphreys.) 61.
